

Purpose and Need Statement

Project Purpose

The purpose of the project is to provide transportation system solutions to improve present and future access to and from I-15 for the safe and efficient movement of people, goods and services, while relieving congestion at current access points along I-15 and I-86 as growth and development continues in the area.

Project Need

The need for the project arises from limited access to the interstate for northbound and southbound motorists living north of I-86 and east/west of I-15 along with the planned commercial and residential growth east/west of I-15 and north of Chubbuck City. Existing conditions have created congestion and safety concerns at current access points and future growth and development will only exacerbate the situation.
